

Channels & Excitability Discussion Journal Club

Monday's, 1:15 - 2:15 pm, Room 9A/B BJCIH (9th floor)

The Ion Channels and Excitability Discussions Journal Club is a core activity of CIMED and Center members are encouraged to be active participants.

Our Journal Club is a great opportunity for trainees to gain practice at presentation, and for each of us to learn.

Recent papers in the general field of membrane excitability are discussed in a friendly, interactive environment. The scope is broad and can accommodate everyone's interests, from physiology to biophysics, and from biochemistry to genetic, animal and clinical studies.

Alternatively, participants are welcome to present their own work, as a way to prepare for a thesis defense, a job talk, or a conference at an outside meeting. Graduate students can take the Journal Club for credit. And, as an added plus, coffee and cookies are served!

On the first Monday of every month, the Journal Club is replaced by the "EXCITE Seminar Series".
